PROJECTS

Know Careers:

This project organizes a career fair for students and companies.

My responsibilities was to convert the already built Angular site to React web app with Redux and Material-UI

Slectus:

This project is a startup in which artists and buyers interact.

Features include commission art, direct order etc.

This project is made using Mongoddb as a Database,Express and Node for server, React for UI and Redux for State Management.

Voting System (FYP):

Autonomous voting system using Blockchain through mobile application.

User can capture his finger picture and can verify his identity from Database and then can vote which then save in blockchain.

Clothee:

It is a single vendor Ecommerce Web Application for selling clothes.

This project is made using Firestore as a Database, React for UI and Redux for State Management.

Eventos:

Eventos is a Event Management Web App which gives you information

regarding happening events so you can join them and also you can CRUD your events.

This project is built using Firestore as a Database, React for UI and Redux for State Management.

LMS:

The Library Management system is used to store the records of books issued/returned by students.

This project was made using MySQL, Node, React and Redux
